SUMMARY

B.Tech Information Technology student with strong data structures and algorithms fundamentals (480+ LeetCode problems with a 1785 peak rating, Codeforces Pupil, CodeChef 2-Star) and hands-on full-stack experience in React, Node.js/Express.js, REST APIs, and SQL/NoSQL databases. Designed and deployed two AI-driven products: a mock-interview platform and an explainable payment-fraud risk platform. Seeking a Software Engineering internship.

EDUCATION

Bhagwan Parshuram Institute of Technology (GGSIPU), New Delhi 2024 - 2028
B.Tech in Information Technology | CGPA: 8.47 | CBSE Class XII (PCM): 95% | CBSE Class X: 92.6%

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL, HTML5, CSS3
Frontend: React.js (React 19), TanStack Start, TanStack Router/Query, Tailwind CSS, React Hook Form, Zod, Recharts, Responsive Design
Backend & APIs: Node.js, Express.js, REST APIs, server-side functions
Databases & Cloud: PostgreSQL, MongoDB, Firebase (Authentication, Cloud Firestore), Supabase, Vercel
AI Integration: Google Gemini API
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems
Tools: Git, GitHub, Linux, VS Code, Postman

PROJECTS

AI-Powered Interview Preparation Platform (PrepAI) Live Demo | GitHub
React, TanStack Start, Firebase, Gemini, Vercel

- Built and deployed a full-stack mock-interview platform with role-based question generation, timed interview sessions, answer evaluation, and personalized feedback.
- Integrated Firebase Authentication and Cloud Firestore to support sign-in and secure, user-specific interview history and results.
- Connected Google Gemini through server-side functions to generate technical questions and evaluate answers, keeping API credentials out of the client.
- Developed a responsive analytics dashboard with interview history, score trends, and technical, communication, and problem-solving breakdowns.
- Delivered the application on Vercel with React 19, TanStack Start, Tailwind CSS, React Hook Form, Zod, and Recharts.

PayShield AI - Explainable Payment Risk Intelligence Platform Live Demo | GitHub
React, Node.js, Explainable AI (XAI), Risk Scoring Engine

- Designed and built a payment-fraud risk platform that goes beyond approve/decline, combining transaction and behavioral signals to generate a real-time, graded risk score for every transaction.
- Implemented a transparent risk engine that shows the factors behind each score, recommends a decision (approve, review, or block), and keeps a full audit trail for merchant trust and compliance review.
- Structured the pipeline as Transaction, Signal Analysis, Risk Score, Explainable Factors, Decision, Audit Trail, addressing both fraud losses and false-positive customer friction.
- Shipped a working hackathon prototype end to end, demonstrating the explainability-first workflow on demonstration transaction data.

ACHIEVEMENTS & EXTRACURRICULAR

- **LeetCode:** solved 480+ problems, maximum rating 1785.
- **Codeforces:** solved 135+ problems, Pupil rating.
- **CodeChef:** solved 140+ problems, 2-Star, highest rating 1498.
- Participant, Smart India Hackathon (SIH) 2025 and VIBE 2 SHIP Hackathon.
- Exploring open-source contributions through Sugar Labs (GSoC preparation). Coding profile: codolio.com/profile/RsDebugger19
