

RONAK SINGH

Software Development Engineer (SDE) Intern

New Delhi, India | ronak9718z@gmail.com | 9718980353

[Codolio](#) | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

B.Tech Information Technology student with hands-on experience building production-quality, component-driven web applications using React.js and modern JavaScript, along with working knowledge of backend development (Node.js, Express.js, REST APIs) and databases (PostgreSQL, MongoDB, Supabase) to ship complete features end to end. Has independently designed and shipped multiple full-stack projects — including an explainable AI-driven payment-fraud risk platform and an AI-powered mock-interview product — demonstrating strong product thinking, ownership, and the ability to translate ideas into working software. Backed by a solid foundation in Data Structures & Algorithms and problem-solving (420+ LeetCode, Codeforces Pupil, CodeChef 2-Star) and core CS fundamentals (OOP, DBMS, Operating Systems). Seeking an SDE Internship at a product-focused organization to grow into a well-rounded, full-stack software engineer.

SKILLS

- **Languages:** Java, JavaScript, HTML5, CSS3
- **Frontend:** React.js (incl. React 19), TanStack Router/Query, Tailwind CSS, Responsive Web Design, UI/UX principles
- **Backend (working knowledge):** Node.js, Express.js, REST APIs
- **Databases:** PostgreSQL, MongoDB, Supabase
- **Core CS:** Data Structures & Algorithms, OOP, DBMS, Operating Systems
- **Tools:** Git, GitHub, VS Code, Postman

EDUCATION

Bhagwan Parshuram Institute of Technology (GGSIPU)

2024 – 2028

B.Tech in Information Technology | CGPA: **8.47** CBSE Class XII (PCM): 95% | CBSE Class X: 92.6%

PROJECTS

PayShield AI — Explainable Payment Risk Intelligence Platform ([Live Demo](#) | [GitHub](#))

React, Node.js, Explainable AI (XAI), Risk Scoring Engine

- Designed and built an explainable payment-fraud risk intelligence platform that moves beyond a simple approve/decline decision — combining transaction and behavioral signals to generate a real-time, graded risk score for every transaction.
- Implemented a transparent risk engine that surfaces the specific factors driving each score, pairs them with a recommended decision (approve / review / block), and maintains a full audit trail to support merchant trust and compliance review.
- Architected the end-to-end pipeline — Transaction → Signal Analysis → Risk Score → Explainable Factors → Decision → Audit Trail — addressing both fraud losses and false-positive customer friction.
- Shipped and deployed a working hackathon prototype end to end, demonstrating the complete explainability-first workflow on demonstration transaction data.

Interview Ace — AI Interview Preparation Platform ([Live Demo](#) | [GitHub](#))

React 19, TanStack Start, Tailwind CSS, Supabase, Gemini AI

- Built the full frontend of an AI mock-interview platform — a timed interview room, live progress/timer UI, and an analytics dashboard (score trends, skill breakdown, history) using React, TanStack Router/Query, and Tailwind CSS.
- Implemented dark/light theming, responsive layouts, glassmorphism UI, loading skeletons, and toast notifications for a polished, production-style user experience across devices.
- Worked with Supabase (Auth + Postgres) on the backend side to wire up authentication and data fetching, and helped integrate AI-generated interview questions and evaluations into the UI.
- Used React Hook Form + Zod for form validation and Recharts for data visualization across the dashboard.

ACHIEVEMENTS & EXTRACURRICULAR

- Solved 420+ problems on LeetCode with a maximum rating of 1663.
- Codeforces: solved 100+ problems, Pupil rating.
- CodeChef: solved 130+ problems, 2-Star, highest rating 1472.
- Participant, Smart India Hackathon (SIH) 2025.
- Participant, VIBE 2 SHIP Hackathon.
- Exploring open-source contributions through Sugar Labs (GSoC preparation); consolidated coding profile available on Codolio.
